

ACCESSORIES AND FEATURES

SmartLift Controller

The SmartLift Controller is designed to operate the light lift using touch pad controls. It can be programmed to automatically stop at any desired height above the floor. It automatically shuts off at the ceiling without being programmed. By removing the key, the SmartLift Controller becomes child resistant and prevents accidental activation of the light lift.

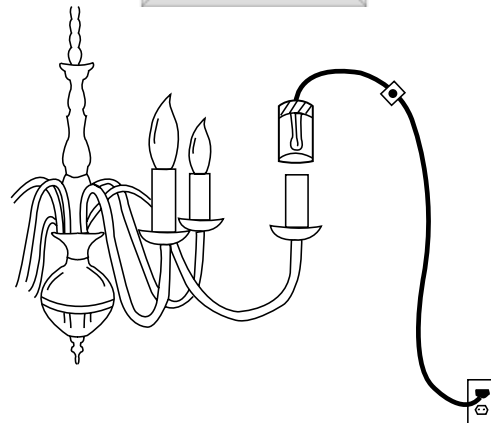

Keyswitch Controller

The Keyswitch Controller is designed to operate the light lift with the simple turning and holding of a key. By removing the key, the Keyswitch Controller becomes child resistant and prevents accidental activation of the light lift.

Relamping Cord

The Relamping Cord is used to temporarily relight a candelabra-base chandelier at floor level. After removing one bulb, thread the socket end of the six foot Relamping Cord into a socket of the chandelier. Plug other end to a 110V outlet. Press the safety switch to light the chandelier in order to determine which bulbs should be changed.

Designed for Years of Safe Operation

Aladdin Light Lift's patented system has been rigorously tested and uses the latest technology for electrical components and its gearing mechanism. Each model is equipped with independent locking systems to securely hold the chandelier. For maximum safety, electrical current is automatically disconnected while the chandelier is lowered. There is no risk of electrical shock while cleaning or changing bulbs.
