

Sensor technology that makes **energy savings automatic.**

Our new Passive Infrared (PIR) Wall Switch Sensor conserves energy by sensing when light is needed and when it is not — and responding accordingly. When people enter the room the PIR technology senses their presence and turns the lights on automatically, then shuts them off again when it “knows” they leave. Timing of the shut-off can be anywhere from 30 seconds to 30 minutes, depending on a user-defined preset, giving you a highly efficient and intuitive way to manage energy.

The WSP250 also has a built-in sensor which holds the lights off when natural light levels are above the preset level, so you're never using more light than you need.

The result is up to 60% in energy savings that also saves you time in installation and operation. The WSP250 fits right into existing boxes, making switch-out fast and easy. And it does all the thinking for you once you've established your desired presets.

With energy management so important for contractors and customers alike, the Legrand/Pass & Seymour WSP250 Passive Infrared Wall Switch Commercial Sensor gives you the ability to save energy, time, and money — automatically.

**Saves up to 60%
on energy costs.**

WSP250W

designed to be better.

Pass & Seymour

P&S Passive Infrared (PIR) Wall Switch Sensor

Dual-voltage model;
120/277 VAC

1-inch deep back body
and flying leads for easy
installation.

Time delay adjustment from
30 seconds to 30 minutes

Adjustable unit sensitivity
(light sensing) from 20% to 100%

LED detection indicator

Built-in light level sensor

WSP250W

180-degree coverage

P&S Passive Infrared Wall Switch Sensors

Cat. No.	Coverage	Load Type	Load Rating
WSP250*	1050 sq. ft.	120 VAC, 60 Hz 277 VAC, 60 Hz	0-800W ballast or tungsten or 1/6 hp; or 0-1200W ballast

*Color Designation

W	BK	LA	I	GRY
White	Black	Light Almond	Ivory	Gray

All devices are US LISTED.
